

Cancer In the Fire Service

Cancer in the Fire Service ... A Growing Epidemic

Why Are We Still Killing Firefighters?

Cancer In the Fire Service... A growing Epidemic Firefighter cancer is on the forefront of both career and volunteer fire service personnel. Cancer is the most dangerous and unrecognized threat to the health and wellness of those in the fire service across our country. We are just beginning to understand the horrific cancer issue, the challenges we face both on the fire ground and through legislation. This program will focus on how company officers, fire commissioners and executive officers can meet the challenges of this disease through education, training, operations, medical screenings and department, as well as personal, accountability to effectively address the cancer issue in the fire service today.

OPEN TO THE PUBLIC. WE URGE EVERYONE TO JOIN US FOR THIS INFORMATIVE SEMINAR
