

Saturday November 10TH

8:30am - 1pm

Why attend?

Ulster County is facing several material management issues, including the loss of markets for recyclable material in China. In addition, there is need for a long-term option for the disposal of residual waste (after waste diversion, reduction and recycling).

This **free** conference will provide information on challenges for the next decade and discuss some solutions. It will also provide a forum for people interested in these issues to meet one another.

Who Should Attend?

Municipal officials, members of CAC and EMCs, Recycling and Solid Waste professionals, activists, members of non-profits and people interested in these issues and challenges.

Please register in advance:
